

Offset outdoor

Designed by Drill Design

We reconstructed the design of the offset chair using metal pipes to make it suitable for outdoor use. The original model for this chair is the Windsor chair, which was extremely popular as a garden chair in England during the 18th century. Both the wooden parts of the seat and tabletop are heat-treated with nitrogen to improve resistance against water, decay, and rot, but are not painted so that they can develop an antique charm as the years pass by. The contrast between the steel and wood will alleviate the lifeless image of outdoor furniture, making you feel relaxed and at home.
