

Transformation

Transformation was designed while taking into account the Japanese way of thinking. An existence is established by overlapping an element to another element. A cube— a block that we consider as a base— appears when the two elements are overlapped. In the process of separating the two elements, it transforms into various formations and shapes. As the one original substance is separated into two pieces, the functionality expands while maintaining the original form. We believe this is the appeal of the style of Transformation.
