

bring on the night

The basic function of a bed is to support the user to have a good sleep every night, which requires the design of a solid structure to prevent shakiness and squeaking. We used thick solid wood as the basic structure since we examined that a solid wood frame is most suitable for securing rigidity and providing extensibility with the addition of option parts.

The wood frame headboard is slanted for fine design and functionality and has fabric with quilting to provide a soft cushion. It was produced focusing on maintaining the relationship between the soft design and wooden frame.
