

Kiku no Hana

The light source is installed at the bottom of Kiku no Hana so that the top and base become one and release soft light. The lighting comes with a dimmer, and the incandescent lamp creates a warm flame similar to the flame of a candle or canola oil.

This is the outcome of our challenge to realize a new lamp reminiscent of a chrysanthemum (Kiku no hana in Japanese) illuminated in the darkness. The Bonbori-type top shade consists of cedar frames thinned to its limit and given the shape of slightly rectangle as a shade with a modern impression.
