

Struct chair

Designed by Daisuke Kitagawa

The Struct chair honors mid-century modern design with chairs that combine chrome metal legs and plywood seats. The series emphasizes the rationality of its structure, using materials that balance strength and warmth. Metal provides durability, while wood adds tactile comfort. The chairs feature stacking functionality in both side and armchair versions, enhancing their practicality and space efficiency. With an elegant curved backrest and refined leg silhouette, the design harmonizes Japanese functional beauty with modern sophistication, making it a versatile addition to any environment.
